

Reliant Retail Project

Introduction to SQL

Problem Statement

Business Context

Reliant Retail Limited, a growing chain of online retail stores, is focused on optimizing its operations and expanding its market reach. With numerous customer orders being processed daily, the company seeks insights from its orders database to enhance its decision-making process. By analyzing key aspects of customer behavior, sales trends, and operational efficiency, Reliant Retail aims to take data-driven actions to drive sustainable growth and enhance customer satisfaction.

Objective

You have been hired by Reliant Retail Limited to analyze the data in their database and answer business-critical questions. Your findings will guide the company in strategic planning and help shape decisions related to sales performance, inventory management, and customer engagement, thereby improving overall business growth.

Business Questions

Question 1: Write a query to display the customer's full name with their title (mr/ms), both first name and last name in upper case with customer email ID, and customer creation date, and display the customer's category after applying the below categorization rules:

- If the customer creation date year < 2005 then category A
- If the customer creation date year >= 2005 and <2011 then category B
- If the customer creation date year >= 2011 then category C

Query:

```
Select
OC.CUSTOMER_ID,
UPPER(OC.CUSTOMER_FNAME) AS FIRST_NAME,
UPPER(OC.CUSTOMER_LNAME) AS LAST_NAME,
OC.CUSTOMER_EMAIL
YEAR(OC.CUSTOMER_CREATION_DATE) AS CREATION_YEAR,
CASE
WHEN YEAR(OC.CUSTOMER_CREATION_DATE) < 2005
THEN 'A'
WHEN YEAR(OC.CUSTOMER_CREATION_DATE) < 2011
THEN 'B'
ELSE 'C'
END AS CATEGORY
FROM ONLINE_CUSTOMER OC;
```

Output Screenshot -

	CUSTOMER_ID	FIRST_NAME	LAST_NAME	CUSTOMER_EMAIL	CREATION_YEAR	CATEGORY
	1	JENNIFER	WILSON	jen_w@gmail.com	1991	A
	2	JACKSON	DAVIS	dave_jack@gmail.com	2001	A
	3	KOMAL	CHOUDHARY	ch_komal@yahoo.co.IN	2002	A
	4	WILFRED	JEAN	w_jean@gmail.com	2006	B
	6	ANITA	GOSWAMI	agoswami@gmail.com	2006	B
	7	ASHWATHI	BHATT	ash_bhat@yahoo.co.IN	2007	B
	8	NEETHA	CASTELINA	neetha20@gmail.com	2011	C
	9	DEVIKA	SATISH	devika_sa@gmail.com	2011	C
	10	BIDHAN	C.ROY	bidhanroy@yahoo.co.in	2011	C
	11	VIKAS	JHA	vikas.jha@gmail.com	2011	C
	12	ARUL	KUMAR.T	arulkumar@gmail.com	2011	C
	13	RAVI	SRINIVASN	r_srinivasn@yahoo.co.in	2012	C
	14	AVINASH	DUTTA	avinash.dutta@yahoo....	2012	C
	15	JYOTI	SINHA	jyotisinha@gmail.com	2012	C

Observations and Insights:

- Customers were segmented into Category A, B, and C based on account creation year using CASE statements.
- The analysis showed that a higher percentage of customers belonged to recent registration years, indicating business expansion and increasing online customer adoption.
- Customer segmentation can help the company design personalized loyalty programs and targeted marketing campaigns for different customer age groups.

Question 2: Write a query to display the following information for the products, that have not been sold: product_id, product_desc, product_quantity_avail, product_price, inventory values (product_quantity_avail * product_price), new_price after applying discount as per the below criteria. Sort the output with respect to the decreasing value of inventory_value.

- If the product price is > 20,000 then apply a 20% discount
- If the product price is > 10,000 then apply a 15% discount
- If the product price is =< 10,000 then apply a 10% discount

Query:

```
SELECT
P.PRODUCT_ID,
P.PRODUCT_DESC,
P.PRODUCT_QUANTITY_AVAIL,
P.PRODUCT_PRICE,
(P.PRODUCT_PRICE * PRODUCT_QUANTITY_AVAIL) AS INVENTORY_VALUE,
CASE
WHEN P.PRODUCT_PRICE > 20000
THEN P.PRODUCT_PRICE * 0.80
WHEN P.PRODUCT_PRICE>10000
THEN P.PRODUCT_PRICE*0.85
ELSE P.PRODUCT_PRICE * 0.90

END AS NEW_PRICE
FROM PRODUCT P
WHERE P.PRODUCT_ID NOT IN
(
SELECT PRODUCT_ID
FROM ORDER_ITEM
)
ORDER BY INVENTORY_VALUE DESC;
```

Output Screenshot:

	PRODUCT_ID	PRODUCT_DESC	PRODUCT_QUANTITY_AVAIL	PRODUCT_PRICE	INVENTORY_VALUE	NEW_PRICE
▶	99999	Samsung Galaxy Tab 2 P3100	50	19300.00	965000.00	16405.0000
	99997	Sony Xperia U (Black White)	50	16499.00	824950.00	14024.1500
	99998	Nikon Coolpix L810 Bridge	50	14987.00	749350.00	12738.9500
	99995	LG MS-2049UW Solo Microwave	100	4800.00	480000.00	4320.0000
	99996	Nokia Asha 200 (Graphite)	100	4070.00	407000.00	3663.0000
	99994	HP Deskjet 2050 All-in-One - J510a Printer	100	3749.00	374900.00	3374.1000
	99991	Dell Targus Synergy 2.0 Backpack	250	999.00	249750.00	899.1000
	99992	Tom Clancy's Ghost Recon: Future Soldier (PC G...	250	999.00	249750.00	899.1000
	99993	Nokia 1280 (Black)	250	999.00	249750.00	899.1000
	99990	Quanta 4 Port USB Hub	50	500.00	25000.00	450.0000

Observation & insights

- Multiple products were identified with available inventory but zero sales transactions.
- Inventory value analysis highlighted products contributing to high storage and holding costs despite no customer demand.
- Dynamic discounting logic was applied based on product pricing, which can help improve inventory turnover and reduce dead stock.

Question 3: Write a query to display product_class_code, product_class_description, count of product type in each product class, and inventory value (p.Product_quantity_avail*p.Product_price). Information should be displayed for only those product_class_code that have more than 1,00,000 inventory value. Sort the output with respect to the decreasing value of inventory_value.

Query:

```
SELECT
PC.PRODUCT_CLASS_CODE,
PC.PRODUCT_CLASS_DESC,
COUNT(P.PRODUCT_ID) AS COUNT_PRODUCT_TYPES,
SUM(P.PRODUCT_QUANTITY_AVAIL * P.PRODUCT_PRICE) AS INVENTORY_VALUE
FROM
PRODUCT_CLASS PC
INNER JOIN PRODUCT P
ON PC.PRODUCT_CLASS_CODE = P.PRODUCT_CLASS_CODE
GROUP BY
PC.PRODUCT_CLASS_CODE,
PC.PRODUCT_CLASS_DESC
HAVING
SUM(P.PRODUCT_QUANTITY_AVAIL * P.PRODUCT_PRICE) > 100000
ORDER BY
INVENTORY_VALUE DESC;
```

Output Screenshot:

	PRODUCT_CLASS_CODE	PRODUCT_CLASS_DESC	COUNT_PRODUCT_TYPES	INVENTORY_VALUE
▶	3000	Promotion-High Value	4	2564300.00
	2050	Electronics	4	1665600.00
	3001	Promotion-Medium Value	3	1261900.00
	2055	Mobiles	2	1092500.00
	3002	Promotion-Low Value	3	749250.00
	2052	Clothes	4	410000.00
	2051	Toys	5	194100.00
	2057	Watches	4	178820.00
	2059	Bags	5	115170.00

Observations and Insights:

- Product classes with inventory values greater than ₹100,000 were identified successfully.
- Certain product categories contributed disproportionately to warehouse inventory costs.
- The analysis can support inventory optimization and demand forecasting strategies.

Question 4: Write a query to display customer_id, full name, customer_email, customer_phone, and country of customers who have canceled all the orders placed by them.

Query :

```
SELECT
CUSTOMER_ID,
FULL_NAME,
CUSTOMER_EMAIL,
CUSTOMER_PHONE,
COUNTRY
FROM
(SELECT
OH.CUSTOMER_ID,
CONCAT(OC.CUSTOMER_FNAME, ' ', OC.CUSTOMER_LNAME) AS FULL_NAME,
OC.CUSTOMER_EMAIL,
OC.CUSTOMER_PHONE,
A.COUNTRY
FROM ORDER_HEADER OH
LEFT JOIN ONLINE_CUSTOMER OC
ON OH.CUSTOMER_ID = OC.CUSTOMER_ID
LEFT JOIN ADDRESS A ON
OC.ADDRESS_ID = A.ADDRESS_ID
WHERE
OH.ORDER_STATUS = 'CANCELLED'
) S
WHERE CUSTOMER_ID NOT IN (
SELECT OH.CUSTOMER_ID
FROM ORDER_HEADER OH
WHERE OH.ORDER_STATUS <> 'CANCELLED'
);
```

Output Screenshot:

	CUSTOMER_ID	FULL_NAME	CUSTOMER_EMAIL	CUSTOMER_PHONE	COUNTRY
▶	41	Tharman Shanmugaratnam	tharshan@yahoo.co.sg	8572898929	Singapore

Observations and Insights:

- Customers who canceled all their orders were identified using sub-queries and conditional filtering.
- The results indicate possible issues related to customer satisfaction, delivery delays, pricing, or product quality.
- This analysis can help the business create retention and feedback strategies for high-risk customers.

Question 5: Write a query to display the shipper name, city to which it is catering, number of customers catered by the shipper in the city, and number of consignments delivered to that city for shipper DHL (9 rows).

Query:

```
SELECT
SP.SHIPPER_NAME,
A.CITY,
COUNT(DISTINCT OC.CUSTOMER_ID) AS NO_CUSTOMER_CATERED_TO,
COUNT((OC.CUSTOMER_ID)) AS NO_CONSIGNMENTS_CATERED
FROM SHIPPER SP
INNER JOIN ORDER_HEADER OH
ON OH.SHIPPER_ID = SP.SHIPPER_ID
INNER JOIN ONLINE_CUSTOMER OC
ON OC.CUSTOMER_ID = OH.CUSTOMER_ID
INNER JOIN ADDRESS A
ON OC.ADDRESS_ID = A.ADDRESS_ID
WHERE SP.SHIPPER_NAME IN ('DHL')
GROUP BY A.CITY, SP.SHIPPER_NAME
ORDER BY SP.SHIPPER_NAME;
```

Output Screenshot:

	SHIPPER_NAME	CITY	NO_CUSTOMER_CATERED_TO	NO_CONSIGNMENTS_CATERED
▶	DHL	Abington	1	1
	DHL	Amherst	1	1
	DHL	Bangalore	3	5
	DHL	Birmingham	1	1
	DHL	Brooklyn	1	1
	DHL	Dharmapuri	1	1
	DHL	Hosur	1	1
	DHL	Hyderabad	2	2
	DHL	W. Alibio	1	1

Observations and Insights:

- DHL shipment performance was analyzed city-wise using customer and consignment counts.
- Some cities showed significantly higher shipment activity, indicating strong customer concentration in those regions.

Question 6: Write a query to display product_id, product_desc, product_quantity_avail, and quantity sold, and show the inventory status of products as below as per the below condition:

- For electronics and computer categories,
 - If sales till date are zero then show 'no sales in past, give a discount to reduce inventory',
 - If inventory quantity is less than 10% of quantity sold, show 'low inventory, need to add inventory',
 - If inventory quantity is less than 50% of the quantity sold, show 'medium inventory, need to add some inventory',
 - If inventory quantity is more or equal to 50% of the quantity sold, show 'sufficient inventory'
- For mobile and watch categories,
 - If sales till date are zero then show 'no sales in past, give discount to reduce inventory',
 - If inventory quantity is less than 20% of quantity sold, show 'low inventory, need to add inventory',
 - If inventory quantity is less than 60% of the quantity sold, show 'medium inventory, need to add some inventory',
 - If inventory quantity is more or equal to 60% of the quantity sold, show 'sufficient inventory'
- Rest of the categories,
 - If sales till date are zero then show 'no sales in past, give discount to reduce inventory',
 - If inventory quantity is less than 30% of quantity sold, show 'low inventory, need to add inventory',
 - If inventory quantity is less than 70% of the quantity sold, show 'medium inventory, need to add some inventory',
 - If inventory quantity is more or equal to 70% of the quantity sold, show 'sufficient inventory'

Query :

```
SELECT
PRODUCT_ID,
PRODUCT_DESC,
TOT_QTY AS QTY_SOLD,
PRODUCT_QUANTITY_AVAIL,

CASE
WHEN PRODUCT_CLASS_DESC IN (
'Electronics', 'Computer'
)
THEN CASE
WHEN (PRODUCT_QUANTITY_AVAIL / S.TOT_QTY) < 0.10
THEN "LOW INVENTORY, NEED TO ADD INVENTORY"
WHEN (PRODUCT_QUANTITY_AVAIL / S.TOT_QTY) < 0.50
THEN "MEDIUM INVENTORY, NEED TO ADD SOME INVENTORY"
WHEN S.TOT_QTY IS NULL
THEN "NO SALES IN PAST, GIVE DISCOUNT TO REDUCE INVENTORY"
ELSE "SUFFICIENT INVENTORY"
END
WHEN PRODUCT_CLASS_DESC IN (
'Mobiles', 'Watches'
)
THEN CASE
WHEN (PRODUCT_QUANTITY_AVAIL / S.TOT_QTY) < 0.20
THEN "LOW INVENTORY, NEED TO ADD INVENTORY"
WHEN (PRODUCT_QUANTITY_AVAIL / S.TOT_QTY) < 0.60
THEN "MEDIUM INVENTORY, NEED TO ADD SOME INVENTORY"
WHEN S.TOT_QTY IS NULL
THEN "NO SALES IN PAST, GIVE DISCOUNT TO REDUCE INVENTORY"
ELSE "SUFFICIENT INVENTORY"
END
ELSE CASE
WHEN (PRODUCT_QUANTITY_AVAIL / S.TOT_QTY) < 0.30
THEN "LOW INVENTORY, NEED TO ADD INVENTORY"
WHEN (PRODUCT_QUANTITY_AVAIL / S.TOT_QTY) < 0.70
THEN "MEDIUM INVENTORY, NEED TO ADD SOME INVENTORY"
WHEN S.TOT_QTY IS NULL
THEN "NO SALES IN PAST, GIVE DISCOUNT TO REDUCE INVENTORY"
ELSE "SUFFICIENT INVENTORY"
END
END AS INVENTORY_STATUS
FROM (
SELECT
P.PRODUCT_ID,
P.PRODUCT_DESC,
PC.PRODUCT_CLASS_DESC,
P.PRODUCT_QUANTITY_AVAIL,
SUM(OI.PRODUCT_QUANTITY) AS TOT_QTY
FROM PRODUCT P
LEFT JOIN ORDER_ITEMS OI
ON OI.PRODUCT_ID = P.PRODUCT_ID
LEFT JOIN PRODUCT_CLASS PC
```

```

ON P.PRODUCT_CLASS_CODE = PC.PRODUCT_CLASS_CODE
GROUP BY
P.PRODUCT_ID,
P.PRODUCT_DESC,
PC.PRODUCT_CLASS_DESC,
P.PRODUCT_QUANTITY_AVAIL
) S;

```

Output Screenshot :

PRODUCT_ID	PRODUCT_DESC	QTY_SOLD	PRODUCT_QUANTITY_AVAIL	INVENTORY_STATUS
220	Hello Kitti Lunch Bag	5	15	SUFFICIENT INVENTORY
221	Cybershot DWC-W325 Camera	4	5	SUFFICIENT INVENTORY
222	KitchAsst Siphon Coffee Maker 500 ml	3	10	SUFFICIENT INVENTORY
223	Sams 21L Microwave Oven	4	5	SUFFICIENT INVENTORY
224	Phils HL 7430 Mixer Grinder 750W	2	3	SUFFICIENT INVENTORY
225	Solmo Non-stick Sandwich Maker 750 W	3	10	SUFFICIENT INVENTORY
226	Solmo Hand Blender Fibre	7	12	SUFFICIENT INVENTORY
227	Phils Wah Collection Juicer JM12	7	2	LOW INVENTORY, NEED TO ADD INVENTORY
228	Adidas Analog Watch	7	10	SUFFICIENT INVENTORY
229	Disney Analog Watch	2	10	SUFFICIENT INVENTORY
230	Esprit Analog Watch	NULL	5	NO SALES IN PAST, GIVE DISCOUNT TO REDUCE INVENTORY
231	HP ODC Laptop Bag 15.5	7	10	SUFFICIENT INVENTORY
232	Women Hand Bag	4	15	SUFFICIENT INVENTORY
233	HP ODC School Bag 2.5'	13	35	SUFFICIENT INVENTORY
234	FLUFF Tote Travel Bag 35LTR	4	8	SUFFICIENT INVENTORY

Observations and Insights:

- Products were classified into Low, Medium, and Sufficient inventory categories using sales-to-stock ratio analysis.
- Several products showed “No Sales in Past” status, indicating slow-moving or non-performing inventory.
- Low inventory products highlighted potential stock-out risks and the need for replenishment planning.
- Category-specific inventory thresholds improved inventory monitoring accuracy.

Question 7: Write a query to display order_id and volume of the biggest order (in terms of volume) that can fit in carton id 10.

Query :

```
SELECT
TAB.ORDER_ID,
TAB.VOLUME
FROM (
SELECT
OI.ORDER_ID,
SUM(P.LEN * P.WIDTH * P.HEIGHT * OI.PRODUCT_QUANTITY) AS VOLUME
FROM ORDER_ITEMS OI
INNER JOIN PRODUCT P
ON OI.PRODUCT_ID = P.PRODUCT_ID
GROUP BY OI.ORDER_ID
)
TAB WHERE TAB.VOLUME <= (
SELECT
(LEN * WIDTH* HEIGHT) AS CARTON_VOL
FROM CARTON
WHERE CARTON_ID = 10
)
ORDER BY VOLUME DESC
LIMIT 1;
```

Output Screenshot:

	ORDER_ID	VOLUME
▶	10061	478125

Observations and Insights:

- The query identified the highest order volume that fit within the defined volume limit of 500000.
- Volume-based order analysis helps improve packaging efficiency and transportation planning.
- Such optimization can reduce logistics costs and improve warehouse space utilization.

Question 8: Write a query to display the customer ID, customer full name, total quantity, and total value (quantity*price) shipped where the mode of payment is cash and the customer's last name starts with 'G'.

Query :

```
SELECT
OC.CUSTOMER_ID,
CONCAT(OC.CUSTOMER_FNAME, ' ', OC.CUSTOMER_LNAME) AS FULLNAME,
SUM(OI.PRODUCT_QUANTITY) AS TOT_QTY,
SUM(OI.PRODUCT_QUANTITY * P.PRODUCT_PRICE) AS VALUE
FROM ONLINE_CUSTOMER OC
INNER JOIN ORDER_HEADER OH
ON OC.CUSTOMER_ID = OH.CUSTOMER_ID
INNER JOIN ORDER_ITEMS OI
ON OH.ORDER_ID = OI.ORDER_ID
INNER JOIN PRODUCT P
ON OI.PRODUCT_ID = P.PRODUCT_ID
WHERE OH.PAYMENT_MODE = 'Cash'
AND OH.ORDER_STATUS = 'Shipped'
AND OC.CUSTOMER_LNAME LIKE 'G%'
GROUP BY
OC.CUSTOMER_ID,
OC.CUSTOMER_FNAME,
OC.CUSTOMER_LNAME;
```

Output Screenshot:

CUSTOMER_ID	FULLNAME	TOT_QTY	VALUE
6	Anita Goswami	25	93237.00
24	Brian Grazer	4	4010.00

Observations and Insights:

- Customers using Cash payment mode with last names starting with “G” were analyzed successfully.
- Total shipped quantity and shipment value were calculated to evaluate customer transaction behavior.
- This analysis can help identify customer payment preferences and high-value customer groups.

Question 9: Write a query to display product_id, product_desc, and the total quantity of products that are sold together with product id 201 and are not shipped to the cities of Bangalore and New Delhi. Display the output in descending order with respect to tot_qty.

Query :

```
SELECT
S.PRODUCT_ID,
S.PRODUCT_DESC,
S.TOT_QTY
FROM (
SELECT
OI.PRODUCT_ID,
P.PRODUCT_DESC,
P.PRODUCT_ID,
SUM(OI.PRODUCT_QUANTITY) AS TOT_QTY
FROM ORDER_ITEMS OI
INNER JOIN PRODUCT P
ON OI.PRODUCT_ID = P.PRODUCT_ID
WHERE ORDER_ID IN (
SELECT
OI.ORDER_ID
FROM ORDER_ITEMS OI
JOIN ORDER_HEADER OH
ON OI.ORDER_ID = OH.ORDER_ID
JOIN ONLINE_CUSTOMER OC
ON OH.CUSTOMER_ID = OC.CUSTOMER_ID
JOIN ADDRESS A
ON OC.ADDRESS_ID = A.ADDRESS_ID
WHERE OI.PRODUCT_ID = 201
AND OH.ORDER_STATUS = 'Shipped'
AND A.CITY NOT IN (
'Bangalore',
'New Delhi'
)
)
AND P.PRODUCT_ID != 201
GROUP BY
OI.PRODUCT_ID,
P.PRODUCT_DESC,
) S
ORDER BY TOT_QTY DESC;
```

Output Screenshot:

PRODUCT_ID	PRODUCT_DESC	TOT_QTY
216	External Hard Disk 500 GB	3
207	Remote Control Car	2
202	Sams 192 L4 Single-door Refrigerator	1
212	Samsung Galaxy On6	1
214	Harry Potter	1

Observations and Insights:

- Products frequently purchased together with Product ID 201 were identified successfully.
- Cross-selling patterns revealed customer purchasing relationships between products.
- The analysis can support recommendation systems, combo offers, and targeted marketing strategies.
- Regional filtering excluded Bangalore and New Delhi to focus on demand patterns in other cities

Question 10: Write a query to display the order_id, customer_id, and customer full name, and total quantity of products shipped for order IDs that are even and shipped to addresses where pin code does not start with "5".

Query :

```
SELECT
OH.ORDER_ID
OC.CUSTOMER_ID,
OC.CUSTOMER_FNAME || ' ' || OC.CUSTOMER_LNAME AS FULLNAME,
SUM(OI.PRODUCT_QUANTITY) AS TOT_QTY
FROM ONLINE_CUSTOMER OC
INNER JOIN ORDER_HEADER OH
ON OC.CUSTOMER_ID = OH.CUSTOMER_ID
INNER JOIN ORDER_ITEMS OI
ON OH.ORDER_ID = OI.ORDER_ID
INNER JOIN ADDRESS A
ON A.ADDRESS_ID = OC.ADDRESS_ID
WHERE OH.ORDER_ID % 2 = 0
AND OH.ORDER_STATUS = 'Shipped'
AND A.PINCODE NOT LIKE '5%'
GROUP BY
OH.ORDER_ID,
OC.CUSTOMER_ID,
OC.CUSTOMER_FNAME,
OC.CUSTOMER_LNAME;
```

Output Screenshot:

ORDER_ID	CUSTOMER_ID	FULLNAME	TOT_QTY
10008	7	Ashwathi Bhatt	25
10022	23	Anna Pinnock	2
10024	32	Hans Zimmer	2
10030	52	Suchirithaa Ekanayake	2
10032	7	Ashwathi Bhatt	7
10034	19	Bharti Subhash	2
10036	24	Brian Grazer	4
10040	3	Komal Choudhary	2
10042	26	Stephen E. Rivkin	2
10046	3	Komal Choudhary	1
10048	33	Niseema Zimmer	1
10054	19	Bharti Subhash	3
10064	35	Thomas Newman	3
10068	51	Ahmad Bin Gh Azali	3
10070	10	Bidhan C.Roy	3

Observations and Insights:

- Even-numbered shipped orders were filtered and analyzed based on pin code restrictions.
- Geographic shipment filtering helped evaluate delivery distribution across different regions.
- Such analysis can improve route planning and logistics efficiency.

Recommendations

- Introduce targeted discounts for slow-moving and unsold inventory products.
- Implement automated inventory monitoring systems to prevent stock shortages and overstocking.
- Improve customer retention programs for customers with repeated order cancellations.
- Use cross-selling recommendations for products frequently purchased together.
- Optimize logistics planning using city-wise shipment and shipper analysis.
- Develop targeted marketing campaigns for high-value and loyal customers.
- Improve warehouse and inventory planning using inventory value analytics.

Final Conclusion

This project successfully analyzed customer behavior, inventory management, sales trends, shipment distribution, and logistics operations using SQL queries. Advanced SQL concepts such as joins, sub-queries, aggregate functions, conditional logic, and inventory calculations were applied to generate meaningful business insights. The findings can help Reliant Retail improve operational efficiency, customer satisfaction, inventory planning, and overall business decision-making. This project demonstrates practical application of SQL for real-world business analytics.
